New Lighting Tool

Jennifer Polanz

When university researchers work together, new tools for growers come about. For example, the collective called Project Lamp, where researchers from multiple universities and the USDA are working together to help CEA growers reduce production costs, has come out with a new calculator designed to show you your lighting electricity costs.

The calculator will not store your data, so you can plug in your numbers and find your costs. Visit uga-lighting-calc.shinyapps.io/lightingcalc for the calculator. **IG**
