# Signify Adds to Toplighting Force Lineup

*Jennifer Polanz*

Signify announced new additions to its Philips GreenPower Toplighting Force (TLF) lineup with 4-channel LED lights in 800W (pictured) and 1040W to meet a wider range of grower needs. These lights provide growers with more precision and operational flexibility, with exact light control for red, blue, white and far-red when connected to the Philips GrowWise control.

According to the announcement, growers cultivating crops like cucumbers, strawberries and young plants can benefit from the ability to apply specific light

treatments, such as end-of-day far-red lighting, and switch to more efficient spectrums when needed. Find out more at [signify.com](https://www.signify.com). **IG**
