Hort Americas' Liquid Organic Nitrogen Fertilizer

Jennifer Polanz

CEA growers looking for a certified organic fertilizer now have it with a new option from Hort Americas in partnership with Avé Organics. The OAN 10-0-0 delivers a 100% plant-available source of nitrogen in a ready-to-use liquid formulation. It's produced in the United States and it's OMRI approved.

"OAN 10-0-0 is the next step in creating sustainable and productive organic systems," said Chris Higgins, president of Hort Americas, in the announcement. "It gives growers the immediate uptake of nitrate nitrogen and the lasting benefits of ammonium nitrogen. It also does this without the handling challenges, logistics issues, odor or inconsistencies of traditional inputs."

Key benefits of this new product include:

- 100% plant-available nitrogen with zero P and K content
- A source of nitrogen without salt
- OMRI-listed and LGMA compliant with a zero-day pre-harvest interval
- Low odor, low solids and no risk of clogged drip systems
- Pathogen-free with rigorous batch testing and posted lab results
- Reduces nitrogen runoff and eliminates the need for raw manure applications
- Compatible with fertigation systems such as drip, sprinkler and pivots; also suitable for banded, broadcast or foliar applications

Available in 270 gal. totes. For more, visit hortamericas.com. **IG**
