Griffin Partners With iUNU

Jennifer Polanz

Seems like everyone is interested in partnering with [iUNU](#), a provider of computer vision, artificial intelligence (AI) and cultivation management software.

I knew I'd written about them before, so I did a quick search on [Inside-Grower.com](#) and found where I wrote about them last: it was their partnerships with Revol Greens and Octiva for their LUNA AI and CMP. At Cultivate'22, iUNU signed another partnership agreement with [Griffin Greenhouse Supplies](#), which will offer high-tech products to increase yield and efficiency.

"There is an influx of new technology solutions promising data-driven optimization and autonomous growing for greenhouse operators. At Griffin, we only work with the best and iUNU has consistently proven their value in the market over the past decade," said Tami Van Gaal, CEA division leader at Griffin. "More facilities run on LUNA than any other AI technology available and for a good reason—LUNA is the best system on the market." **IG**
